APPLICANT : SONY CORP;

INVENTOR : MURAI YUKIO;

INT.CL. : G03B 21/62 H04N 5/74

TITLE : PROJECTION TELEVISION

ABSTRACT : PURPOSE: To perform safe and reliable mounting of a screen member without breakage and to simplify a removing work by mounting the screen member to projection television body in coordination with a magnet and a magnetic substance.

CONSTITUTION: Magnets 26 are mounted at intervals of a given distance to the periphery of a screen member 12 and on a television body casing 14. A cushion member 28 is laminated on the inner surface of the tip part of a press door 22 rotatably mounted by means of hinges 24. The magnets 26 have a height set so that when the press door 22 is rotated and brought into contact with the screen member 12, a gap is provided between the inner surface of the press door 22 and the screen member. The provision of the gap causes press of the screen member 12 against the television body casing 14 in a state that the cushion member 28 is squeezed as the press door 22 formed of a magnetic material is attracted to the magnets 26, and this way causes holding of the screen member.
